

## Dear Health Professional

Your patient has presented you with their personalized brain baseline results. The data sets are taken from the Brain Resource International Database, after screening with WebNeuro, part of a AAR-BRC joint initiative to screen one million aging Americans aged 50-90+ for free, in order to promote Brain Health awareness in our country.

It could happen that some or all of their results show “Below Expectation”. This does not mean that something is terribly wrong, but it does mean you could consider investigating this further.

Information you may want to consider as a support for your clinical decision- making is on our website at [www.brainresource.com](http://www.brainresource.com) under the heading ‘WebNeuro’ where there is a full professional manual for the test. What your patient has received is a very truncated report, but the data behind this is actually quite extensive. In this regard, you can also request a more detailed report from us, if you deem this necessary. This will attract a fee of \$25.

There are many reasons why their report may show less than perfect scores: these include, but are not limited to, fatigue, culture and language issues, medication, distraction or noise, PC or mouse malfunction, or just personal variations. WebNeuro is a scientifically validated and accurate tool, but can never replace the clinician and wider investigation.

The insights into brain-related functions that BRC toolkits offer have unprecedented levels of reliability and validity, drawing on the world’s only standardised, integrated neuroscience database. Over 16 000 datasets underpin more than 450 peer-reviewed journal publications from more than 100 centres in 8 countries. An IBM Business Partner, our platforms are used in research by ten of the world’s fifteen leading Pharma companies. We are foundation members of the MIT Center for Biomedical Innovation, and we are collaborating with the Alliance for Aging Research in the USA in screening up to a million Americans in a similar vein to our work here in Australia.

For further information, visit [www.brainresource.com](http://www.brainresource.com) and [www.brain-dynamics.net/](http://www.brain-dynamics.net/) or email [webneuro@brainresource.com](mailto:webneuro@brainresource.com)

Best wishes

**Roy Sugarman PhD** and the team at Brain Resource Company
